

# Rock tools Centrevo™

Our suite of digital solutions

# Unlock your true potential with Centrevo™

At Sandvik we're dedicated to change our industry for the better through safer, more productive and more sustainable drilling operations. Centrevo™, our suite of digital solutions, gives you easy access to performance data and business insights as well as our support and expertise – helping you reach your full potential. We believe in more co-working with less paperwork. Explore rock tools Centrevo™ today and start making better decisions tomorrow.

Centrevo™ Track application

## Optimize your operation

With Centrevo™ Track your rock tools service contract is digitalized, enabling us to provide more value and help your business excel. Using Track gives increased visibility and control of the operations on-site, enabling near real-time analysis of your rock tools data, including:

- Rock tools performance tracking
- Discard monitoring
- Operational overview
- Benchmarking

By using rock tools services and the Track application to digitize their inventory management during a field test, substantial improvements were registered for tool waste reduction, circuit stock optimization and tool service life. An underground contract miner reduced the cost per meter (CPM) by 30%, corresponding to annual savings of USD 580,000.

\*Results may vary depending on drilling conditions, service and usage levels and other circumstances, thus Sandvik does not guarantee the same outcome in any other condition.

CPM reduction in recent field tests

# 30%

Centrevo™ Drill application

## Improve your drilling performance

Drill is an interactive customer training based on drill hole simulation, for top hammer, down-the-hole and rotary drilling. The practical training module is designed to be mobile and used in and around drilling operations, both as a classroom training and as a remote version. Drill supports in demonstrating the operational impact on rock tool life and performance when using the correct settings and practices.

Centrevo™ Analyze application

## Reduce your waste and boost your productivity

Analyze is a mobile application designed for failure and discard analysis of Sandvik rock tools and provide guidance on improvements – all remotely. The aim is to determine the root cause of the failure or discard reason of the rock tool, prevent it from happening again and to help improve future performance.

Centrevo™ Report application

## Level up your operational efficiency

The Report application is used by your Sandvik representatives to help increase productivity and improve customers operational efficiency. The different digital reports, like rock tools report card, customer visit report, and site audit report – all help to get new insights on how to further improve rock tools performance and collaboration.

*“Our Centrevo™ suite represents best-in-class digital solutions in the rock tools field. They enable increased productivity, waste reduction and help our customers realize significant improvements in their operations – making them more profitable and sustainable in the process.”*

Rickard Andreasson, Acting Vice President Product Line Services,  
Rock Tools Division, Sandvik Mining and Rock Solutions
